

CITY OF GUELPH ZONE 2 INFRASTRUCTURE UPGRADES PLANNING STUDY

Overview

The City of Guelph has undergone a Master Planning exercise for both Water Supply and Water Distribution. As part of these Master Plans a number of system upgrades have been planned including additional sources, a new pumping station and reservoir, new watermains and an elevated tank. C3 Water Inc. has been retained to review the upgrades associated with Pressure Zone 2 and develop a schedule to implement the upgrades.

The City has identified that Zone 2 requires additional storage, additional feeder main capacity, and additional pumping capacity to alleviate existing concerns and provide for growth.

The City's all pipe Inofwater model will be utilized to ensure that the most economical combination of upgrades will be implemented to ensure a viable short and long term solution addresses existing Zone 2 deficiencies while allowing for growth.
